DataCite: Getting Started
Account management
About Fabrica

Fabrica is DataCite’s web interface for DOI registration and account management.

You can log in here: https://doi.datacite.org/

You can reset the password here: https://doi.datacite.org/reset
Log in with your Member or Consortium Organization account to manage Repository accounts and add/update contact information.

Example Member account

Fabrica documentation:

1. The Fabrica user guide provides detailed descriptions of how to use the different features of the web interface.

2. The Fabrica FAQ provides quick answers to frequently asked questions.
Test accounts

The DataCite test environment is completely separate from the production environment. Use test like a sandbox for creating your first DOI or setting up an integration.

- **DOI Fabrica** (https://doi.test.datacite.org)
- **REST API** (https://api.test.datacite.org)
- **MDS API** (https://mds.test.datacite.org)
Test environment documentation:

1. The testing guide includes information about the test site and how to access.

2. The test FAQ highlights the main differences between test and production.
Access: Which account should I use?

**TEST**
Follow the exact same process in the TEST ENVIRONMENT with your TEST credentials! Test and production are completely separate environments.

**DOI Fabrica** ([https://doi.test.datacite.org](https://doi.test.datacite.org))
**REST API** ([https://api.test.datacite.org](https://api.test.datacite.org))
**MDS API** ([https://mds.test.datacite.org](https://mds.test.datacite.org))

START: Where do you want to access?

**PRODUCTION**

Which method do you want to use?

**API:**
- REST ([https://api.datacite.org](https://api.datacite.org))
- MDS ([https://mds.datacite.org](https://mds.datacite.org))

What do you want to do?

Create/update a DOI

Is your organization a Direct Member?

Yes

Use your REPOSITORY account e.g. OUBU.UYTRU

No

I don’t know?

Use your MEMBER account e.g. XYZX

Create a Repository or update contact information

Use your CONSORTIUM ORGANIZATION account e.g. OIKJ

contact: support@datacite.org
DOI Registration
There are 3 ways to register a DOI:

1. The Fabrica web interface provides two options for registering DOIs. The easiest option for non technical people is the form for DOI creation. There is also the file upload option which accepts metadata files in XML and other formats.

2. The APIs are for developers looking to build an integration and for anyone who wants to retrieve metadata. New users should use the REST API. A detailed guide for using the REST API is available as well as the API reference.

3. Some organizations choose to register DOIs with a registered integration from a DataCite Service Provider.
DOI Basics

Prefixes
A DOI prefix always starts with '10.' and continues with a number (e.g. '10.1234' or '10.20865'). The DOI prefix is used as a namespace so that DOIs are globally unique. Each Repository account must have a prefix to register DOIs.

10.5438/9te8-5h68

Suffixes
The easiest and recommended option is to use a randomly generated suffix. If you choose not to use this option, remember:

1. The DOI suffix must be unique within each prefix. The optimum length of a DOI suffix is 6-10 characters.
2. Only use a-z, 0-9 and - in a DOI suffix. Other characters might have special meaning or will be escaped. DOI suffixes are not case sensitive.
3. Avoid human-readable information in a DOI suffix because any meaning may change over time. Further advice on DOI suffixes.

You can generate a random suffix in both Fabrica and the API and your DOI will look something like this:

10.5438/9te8-5h68
**Versioning**
DOI metadata can be updated. This includes the content underlying the DOI, e.g. correcting small errors like typos or adding a new file. This means small changes don't always require a new DOI. Individual stewards need to determine which are major vs. minor versions.

**Data Citation**
Data Citation means references to data, in the same way researchers routinely provide a bibliographic reference to other scholarly resources. Data are often shared, but they are not often cited the same way as journal articles or other publications. Repositories can participate by including information about publications that cite the data in DOI metadata.
Metadata
Everything you need to know about DataCite’s metadata schema can be found here:

https://schema.datacite.org/

The detailed guide includes definitions and descriptions of every metadata property plus lots of examples. It is updated and maintained by the Metadata Working Group.
FAQs & Resources
Frequently asked Questions

Below is a list of questions commonly asked by DataCite users:

○ I can’t see the create DOI option? Check which account you’re using (only Repository accounts can create DOIs).
○ There’s a problem with Fabrica cache? Try a browser refresh.
○ Which contact receives the password reset? The system email contact.
○ Can I delete or change a DOI created by accident? Deletion is not possible once the DOI is in registered in findable state.
○ Why is my URL not accepted when registering a DOI? Check your Repository account domain filter settings.
○ Why am I getting a 403 or unauthorized message from an integration? There is a problem with the prefix/ID or password.
○ How can I activate the ORCID auto-update? Enable the ORCID auto-update in DataCite profiles.

Please refer to the knowledge base on the support site for answers to more FAQs.
