

Common DOI Search

The FREYA project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 777523.

Goal: All DOIs in one place

“Common DOI Search” where a user can look up a DOI regardless of which registration agency that DOI comes from.

At minimum, this means that when you want to know more about a DOI, **you don't have to know ahead of time whether it comes from DataCite or Crossref or somewhere else.**

The Common DOI Search will be completed by the end of FREYA (end of 2020).

Features

- Include DataCite Search functionality (search.datacite.org)
 - Usage and Citations Display
 - Formatted Citation Export
 - ORCID Claiming
- Include Researcher Profile functionality
(visit doi.datacite.org/users/{YOUR-ORCID})
 - ORCID Aggregated metrics
 - Resources List (DOIs)
- Include Organisations aggregated resources
 - ROR id Aggregated metrics
 - Resources List (DOIs)

The Tech bit...

- Totally new technology stack to all other frontend services
- We eat our own dog food: uses the new GraphQL API in the backend
- Completely separated from our DOI minting services.
