SARALA WIMALARATNE
Our mission is to be the world's leading provider of persistent identifiers for research. Our vision is to connect research and identify knowledge through providing the means to create, find, cite, connect, and use research.
Freya

A discovery service that enables simple searches while giving users a comprehensive overview of connections between entities in the research landscape.

Excavations at St Peter's Church, Barton-upon-Humber
H E M Cool & H E M Cool
Archive published 2011 in Archaeology Data Service
St Peter’s Church at Barton-upon-Humber (TA 347 2194) was declared redundant in 1972 and taken into public guardianship in 1978 by the then Department of Environment. Given that it had long been recognised that it had a late Saxon origin, a major programme of excavation and survey was instituted. This explored the church and its churchyard, and ran from 1978 to 1984 under the direction of Warwick Rodwell. The programme has meant that this is the most intensively studied and recorded parish church in the country. It also produced the largest collection of human remains ever excavated in the UK. The latter provide a unique insight into the population of a small, relatively isolated, market town over 900 years.
DOI registered March 9, 2011 via DataCite.

Identification and quantification of archaeological projects arising from aggregates extraction in Greater London
H E M Cool
Archive published 2011 in Archaeology Data Service
The project aimed to identify and quantify past archaeological investigations arising from hard and soft aggregates extraction in Greater London, which currently have incomplete or inappropriately low levels of dissemination. The study provides a basis for a future strategy to improve and widen public dissemination of the results of such investigations, including the deposition of data into a publicly accessible research archive.
DOI registered November 10, 2010 via DataCite.
